**DETAILED ACTION**

1. In view of Applicants' arguments in their Appeal Brief filed January 20, 2004, the finality of the previous office action has been withdrawn and prosecution has been reopened. New rejections have been made in view of newly cited prior art. Claims 18-20 and 31-33 remain withdrawn from consideration as being drawn to a non-elected invention.

***Priority***

2. Acknowledgment is made of applicant's claim for foreign priority based on an application filed in Germany on December 22, 2001. It is noted, however, that applicant has not filed a certified copy of the German application as required by 35 U.S.C. 119(b).

***Claim Rejections - 35 USC § 102***

3. Claims 9, 13 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by US 4,297,143 (Kleinschmit et al.).

Kleinschmit teaches a compacted layer of a pyrolytically produced silicon dioxide mixed oxide comprising 0.01 to 9.9 weight percent titanium dioxide for use as thermal insulation (see abstract). Kleinschmit further teaches that that the mixed oxides have a Bet surface area of 50 to 400 m<sup>2</sup>/g (col. 1, lines 44-46).

***Claim Rejections - 35 USC § 103***

4. Claim 10-12 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kleinschmit et al.

Art Unit: 1775

As sated above, Kleinschmit teaches a compacted layer of a pyrolytically produced silicon dioxide mixed oxide comprising 0.01 to 9.9 weight percent titanium dioxide wherein the mixed oxide particles have a Bet surface area of 50 to 400 m<sup>2</sup>/g.

Although the Kleinschmit reference fails to teach the claimed thickness (a result effective variable) of the silicon dioxide mixed oxide, absent a showing of criticality with respect to the thickness, it would have been obvious to one of ordinary skill in the art to optimize the thickness in order to provide a desired level of insulation. It has been held that discovering an optimum value of a result effective variable involves only routine skill in the art. In re Boesch, 617 F.2d 272, 205 USPQ 215 (CCPA 1980).

It further would have been obvious to one of ordinary skill in the art at the time of the invention to apply the mixed oxide to a silica glass or a glass-ceramic substrate because these are materials which are known in the art to need thermal insulation.

#### ***Allowable Subject Matter***

5. Claim 14 and 15 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 21-30 are allowed over the prior art of record.

7. The following is a statement of reasons for the indication of allowable subject matter: None of the prior art or record teaches the claimed layer of mixed oxide powders having the claimed BET ratio.

#### ***Response to Arguments***

8. Applicants' arguments in the Appeals Brief have been deemed persuasive and the rejections have been withdrawn. New rejections to claims 9-13, 16 and 17 have been

Art Unit: 1775

made over newly cited art of record. The finality of the previous office action has been withdrawn.
